

JOB POSTS

STREAMLINE JOB POSTS FOR YOUR PROJECTS IN CLOCKWORK

Easily create job posts that pull specified information from your projects. The public URLs can be shared on your website or social media accounts to attract candidates.

Customizable

Accessible with one click on the project page, a simple panel lets you specify which project data you want included in the job post.

Branded

Featuring the client logo and your firm logo, the branded job post creates brand awareness and builds your reputation.

Automated

Clockwork notifies your team when someone submits interest, and automatically adds new candidates to your database and the project.

Time-Saving

Save time and effort with Clockwork generated Job Posts; focus your attention on more important matters.

Simplify Your Job Posting Process

Enable this feature for all your Firm's users for a flat annual fee.* Don't waste time manually pulling project data to put into an external job posting system, or importing candidate data from external job post submissions. Job posts can be created with a few easy clicks for each project you manage in Clockwork. Simply click on the Job Post Panel link from within a project, then select the project data you want included in the posting. Once the job posting is auto-generated, you can also add a customizable form that allows candidates to submit interest for that project.

* Job Posts is an add-on feature. Additional subscription fees apply.
